

SAFETY TUBS® TO UNVEIL REVOLUTIONARY WALK-IN FEATURES AND OPTIONS AT 2007 K/BIS SHOW

T5 Door System Technology, Two Seater Walk-In Bath, Chromotherapy and Minute Drain™ Fast Water Removal System will be showcased at Booth N1529

Charlotte, NC – May 2007 – Safety Tubs®, the industry leader in high-quality walk-in bathtubs, announced its plans to unveil revolutionary features and options to the industry's first acrylic walk-in bathtub at the 2007 K/BIS show in Las Vegas on May 8-10. Safety Tubs will be at **Booth #N1529**.

Safety Tubs® were the first to introduce walk-in tubs to feature acrylic construction, built-in chair-height seats, a patent-pending leak-proof door system, multiple therapy options and deeper soaking dimensions. "Since introducing Safety Tubs, the feedback has been overwhelming including appearances on Extreme Makeover: Home Edition and The Price Is Right," said Andre Neidich, Owner of Safety Tubs. "We are continuously modifying the tub to better serve our customers."

New Safety Tubs' Features:

- The patent pending **T5 Door System Technology** eliminates the need to step over the front of the tub and is guaranteed not to warp, rust or leak.
- The **Two Seater Walk-In Bath** is the first walk-in bathtub designed for two.
- **Ozone**, a self-cleaning sanitary system is now standard in all Safety Tubs Jet Massage Systems. Ozone oxidizes and eliminates disease-causing microorganisms.
- The **Legs Only Massage** allows bathers to fill their Safety Tubs halfway for a quick leg massage.

New Safety Tubs' Options:

- No more waiting with the patent-pending **Minute Drain™ Fast Water Removal** system. This system is up to 5 times faster than conventional draining systems.
- Turn your baths into health spas by adding the **Chromotherapy** and **Aromatherapy** options to the Safety Tubs whirlpool system.
- Save time and money by using Safety Tubs hi-gloss, pre-cut, ready-to-install **Acrylic Wall Surrounds** when installing your Safety Tub.
