

FOR IMMEDIATE RELEASE

SAFETY TUBS® ANNOUNCES PATENT FOR REVOLUTIONARY T5 DOOR SYSTEM TECHNOLOGY

Charlotte, NC – February 25th, 2008– Safety Tubs®, the industry leader in acrylic walk-in bathtubs, announced today that it has received a patent for its T5 Door System, a significant industry breakthrough for the company that introduced the first ever acrylic walk-in bathtubs with built-in, 17" chair-height seats.

"The door system is the single most critical aspect of the walk-in bathtub and Safety Tubs has the patent on the best method for installing a walk-in tub door to ensure durability, reliability and waterproof performance for life," said Andre Neidich, Owner of Safety Tubs. "This patent shows our customers Safety Tubs' dedication to innovation and setting new standards for quality and lifetime performance."

Installed similar to a pre-hung door system, this technology offers manufacturing consistency and quality on every bathtub. Its aluminum frame maintains structural integrity of the tub by keeping the tub from warping and or twisting due to moisture changes in the bathroom. The seal on the T5 system can be easily removed and replaced by the homeowner if it ever needed.

Other features of the Safety Tubs T5 Door System include:

- Santoprene® T5 Water Tight Door Seal which maintains its shape and is guaranteed not to leak for life.
- Robust, premium grade T5 door hinge for strength and durability.
- Soft Touch™ T5 Door Handle System that ensures secure closure, designed for minimal closing effort and ergonomically styled for comfort and ease of operation.

About Safety Tubs®, LLC
